cybera

is a service facilitated by the **Canadian Shared Security Operations Centre** (CanSSOC) that delivers sector-specif c threat intelligence to schools.
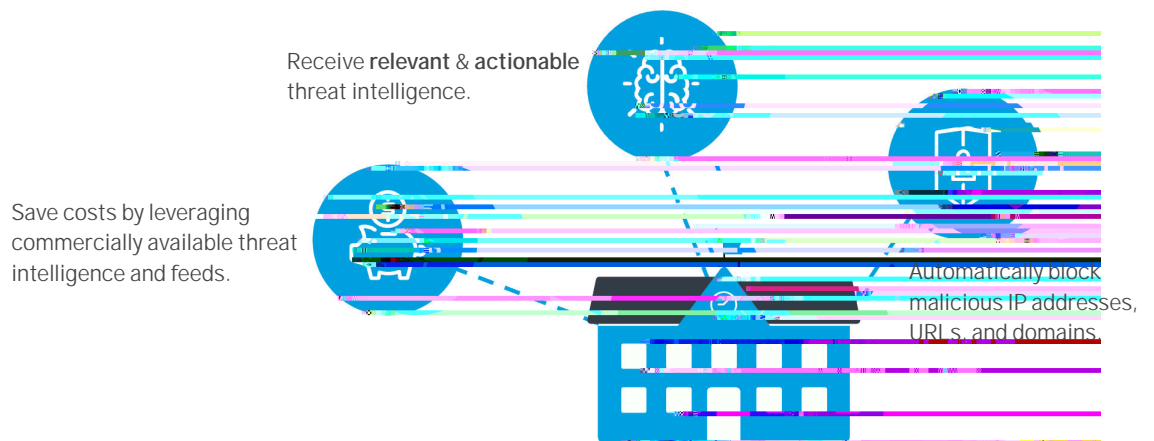

The platform aggregates and curates threat intelligence from government entities, commercial threat intel providers, member institutions, and the open-source community. These feeds can be deployed into organizations' existing security appliances —such as f rewalls —for activities such as blocking malicious source IPs, domains, and URLs.

BENEFITS OF SUBSCRIBING TO THREAT FEED

- Gain access to a curated list of global malicious threats that can be applied to your school's network protection devices

  Service easily integrates into most next-generation f rewalls

- Reduce time and money spent on subscribing to general security feed services, or maintaining your own intel
- Strengthen your security posture by receiving a feed that **automatically** blocks threats
- Receive frequent updates, ensuring you have the latest information that is easy to consume and share

Receive **relevant** & **actionable** threat intelligence.

Save costs by leveraging commercially available threat intelligence and feeds.

Automatically block malicious IP addresses, URLs, and domains.
